## Genes gained in PELE1 BP TreeMap

glucose 6-phosphate metabolic process	cellular glucose homeostasis	regulation of lipid catabolic process	artery morphogenesis	ovulation	mannose metabolic process
carbohydrate phosphorylation	microtubule-base fatty acid derivative catabolic process	d process female pregnancy	microtubule-based process	negative regulation of cell cycle	hexose metabolic process glucose metabolic process
		transforming growth factor beta receptor signaling pathway	mitotic cell cycle	G protein–coupled receptor signaling pathway	hexose metabolic process
glycolytic process	prostaglandin metabolic process	microtubule cytoskeleton organization	unidimensional cell grov	vth cytoskeleton organization	monosaccharide metabolic process
