## Genes gained in PHEI1 BP TreeMap

glutathione metabolic process	regulation of male germ cell proliferation	innate immune response	negative regulation of reproductive process	biosy	amide /nthetic ocess		
	<b>signal transduct</b> sphingomyelin catabolic process	<b>ion</b> protein refolding	cell junction disassemb	cell junction disassembly inflammatory response		actin filament capping  barbed-end actin filament capping	
actin filament severing	prostaglandin biosynthetic process	locomotory behavior	signal transducti	ion sulfur compound			
		actin filament network formation	on response to hea	at	metabolic process	barbed-end actin filament capping
