Genes gained in Tetrapoda BP TreeMap

Genes gamed in Tetrapoda Dr. Treelviap	
positive regulation of protein K63-linked deubiquitination of processing processing processing processing processing decivity regulation of glucose metabolic process process process regulation of glucose metabolic process process process process process regulation of RNA biosynthetic process p	germline stem cell asymmetric division spermatogonial cell division spermatogonial division s
regulation of DNA methylation-dependent heterochromatin assembly regulation of genetic imprinting regulation of plasminogen activation of protein maturation positive positive regulation of positive regulation of positive positive positive regulation of positive regulation of positive positive regulation of positive positive regulation of protein process regulation of	fusion of sperm to egg plasma nembrane involved in insigle fertilization gamete generation process involved in gamete generation process involved in gamete generation process of process involved in gamete generation generation generation process of process involved in gamete generation
tyrosine phosphorylation of protein deubiquitination of STAT protein protein process p	generation acrosome reaction reaction regulation of release of release of the releas
positive regulation of receptor signaling pathway response regulation of intracellular estrogen receptor signaling pathway response, signal transduction of DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response, signal transduction positive regulation of to DNA damage response positive regulation positive regulation of to DNA damage response positive regulation positive regulation of to DNA damage response positive regulation positive regulation of to DNA damage response positive regulation positive regulation of to DNA damage response positive regulation positive regulation of the response positive regulation positive regulation of the response positive regulation positive	cytochrome c from mitochondria regulation of mitotic positive regulation of podsorme assembly regulation of pseudopodium assembly regulation of pseudopodium assembly regulation of positive regulation of pseudopodium assembly regulation of pseudopodium assembly regulation of positive regulation of pseudopodium assembly regulation of pseudopodium assembly regulation of positive regulation of pseudopodium assembly regulation of positive regulation of of neuron positive regulation of neuron positive regulation of of neuron
positive regulation of pattern recognition (hypoxic) response to hypoxic signaling pathway receptor signaling pathway receptor 4 signaling pathway in death of extrinsic apoptotic signaling pathway in death of extrinsic apoptotic signaling pathway by p53 class mediator pathway by p53 class mediator regulation of protein kinase excitatory regulation of protein kinase and pathway p53 class mediator positive regulation of protein kinase and pathway p53 class mediator positive regulation of protein kinase and pathway p53 class mediator positive regulation of protein kinase and pathway p53 class mediator positive regulation of protein kinase and pathway p53 class mediator positive regulation of protein kinase and pathway p53 class mediator p53 class mediator positive regulation of protein kinase and pathway p53 class mediator p53 class mediato	assembly
excitatory postsynaptic positive regulation of cell death of cell cycle G1/S phase transition of homotypic of	negative regulation of single stranded viral RNA replication via double stranded DNA intermediate DNA intermediate DNA intermediate regulation of single stranded viral RNA replication of single strande
regulation of nononuclear cell eukocyte proliferation of megative regulation of mononuclear of megative regulation of mononuclear of mononuclear of cell substrate adhesion regulation of megative regulation of cell cell of mononuclear of cell gradient of mononuclear of cell substrate adhesion regulation of megative regulation of megative regulation of megative regulation of megative regulation of cell cell gradient of megative regulation of membrane depolarization regulation of cell cell gradient regulation of cell cell gradient regulation of membrane depolarization regulation of cell cell gradient regulation of cell gradient regulation of cell cell gradient regulation of cel	replication via double stranded DNA intermediate single stranded viral RNA replication via double stranded DNA intermediate single stranded viral RNA replication via double stranded DNA intermediate viral process of the properties of the prope
