Genes gained in Geoplanidae MF TreeMap

interleukin–1 receptor binding		cytokine activity				ion channel inhibitor activity		protein kinase inhibitor activity		protein serine/threonine phosphatase inhibitor activity		
						е		enzyme inhibitor activity				
interferon–gamma receptor binding	protein binding		Notch bindir						enzyme inhibitor activity		signaling receptor activator activity	
					ng	calcium channel regulator activity		protein kinase regulator activity		signaling receptor regulator activity		
					receptor ligand							
	host cell sur receptor bin			binding				cific mRNA binding	RNA polymerase III cis-regulatory region sequence-specific DNA binding			
	receptor bill	unig			activity	telomeric DNA binding	telomeric DNA bindir				rDNA binding	
			gro	growth factor binding			steroid binding		RNA polymerase III transcription regulatory region sequence–specific DNA binding
