Genes lost in Ellobiida BP TreeMap

hranching regulation negative complement negative positive negative positive	positive regulation of double-strand break positive regulation of double-strand break positive regulation of description of double-strand break positive description de
is up and in defification of regulation of r	
Involved in ureteric bud ureter	positive regulation of differentiation development system self-avoidance maturation
norphogenesis autonomic embry chemotaxis pathway proliferation proliferation proliferation response production	regulation regulation myelination myelination
cartilage cartil	ession by miRNA position of autophagy and pairing
development develo	s of host superior inhibition mediated disposance in inhibition mediated kappaB milking inhibition mediated with the inhibition mediated kappaB milking inhibition mediated kappaB milking inhibition mediated kappaB milking inhibition mediated kappaB milking inhibition mediated with milking inhibit
ectoderm development bone de	kappaB inhibition of inhibition of activity translation inhibition translation inhibition of tra
interference general little letter letter little letter le	positive regulation peripheral establishment of apoptotic recognition peripheral establishment of apoptotic recognition peripheral p
positive regulation of of T cell mediated lymphocyte regulation of the continue positive regulation of the continue regulation regulation of the continue regulation reg	biosynthetic myelin involved in
	DNA recombination blood-brain barrier development
Vesicie regelement boundary of the positive regulation of	dation of gene silencing bereather in the peripheral peripheral newtons axon peripheral newtons axon peripheral newtons axon newtons
developinent regulation of reg	regulation of regulation of cathological positive regulation r
development animaterians development negative differentiation (equiation of immure of the control of the contro	ulation metabolic metaboli
female large development penaltive regulation production penaltive regulation production	resolon regulation of positive regulation regulation of positive regulation regulation of positive regulation r
alveolus ameninguation development development and profileration of immune pro	printing elongation ipid catabolic catebrytrate process retabolic process retabolic process process retabolic process retabolic process retabolic process process retabolic process
tumor cell business of leukocyte (Cell possible regulation of regulation	negative negative negative regulation of reg
Specification sementation boundary designment of the control of th	gene silencing destiranscriptional protein catabolic differentiation by miRNA gene silencing protein catabolic differentiation differentiation differentiation differentiation differentiation differentiation differentiation
establishment of skin pronephros of skin pro	TRAIL-activated apoptotic Wnt peroxide Wnt peroxide Cataconium ion Organic anion Organic anion
of skin pronephros with mounts pronephros with forming production of regulation	kine-mediated signaling si
positive positive positive positive positive positive	pathway pathway pathway pathway pathway pathway
regulation of re	ionotropic cliary regulation cell surface glutamate glutamate of Notch cell—cell acid transport
clientonitie-initiation tumor necrosis Rho protein signaling pathway factor-mediated signaling pathway facto	no protein receptor receptor signaling signali
polymerization of autophagosome polymerization of autophagosome polymerization of autophagosome	signa cell surface receptor adrenergic transport transport transport transport
inhibitory positive p	nsduc signaling pathway signaling pathway organic cation transport
cel surface NIK/NF-kappaB plant cell singuistics (regulation of regulation of regulati	ern recognition transport transport transport transport
potential potent	pathway signaling signalin
positive pos	pathway pathwa
of Learning requision of thyroid hormone by patheny power and the sample of the sample	ceptor signaling coll surface receptor signaling re
KRIASSINY-KAR Process nucleic regulation apoptotic apop	yellor nucleotide cond messenger signaling receptor activity and messeng
Cell microtubule Coat m	positive negative positive pole plasm pole plasm pole plasm pole plasm pole plasm
Serotonin receptor growth factor regulation of regulation	viosine regulation of regulation of regulation of regulation of regulation of regulation regulation regulation
protein kinase androgen positive regulation protein pr	phorylation activity phosphorylation localization localization pregnancy of cell population population of cell adhesion
transforming growth factor beta	gative positive positive regulation of regul
receptor signaling receptor sign	game in explation of regulation regula
politimary stress stress representation and the reception of the control of the c	of cellular of cell
strings and strings are strings and strings and strings and strings and strings are strings and strings and strings and strings are strings are strings and strings are strings are strings and strings are strings are strings are strings and strings are string	micrott. matogonial
factor receptor signaling pathway and path	phosphorylation specification cellular process
antimicrobial defense activation humoral immune humoral immune control immune and provided the control immune c	K63-inked hexxokinase positive positive
cellular response mediated response mediated response mediated continuous response mediated response m	activation of negative in tyrosine regulation of regulatio
response to by anumicional numbers of the process o	e activity popidyl-revenine of peptidase prospherylation of popidase activity activity activity regative regulation of policy activity activity regative regulation of policy activity regulation regulat
ontivities migration process systems and the state of the	phosphatase activity phosphata
addaptive response immune resp	regulation or positive regulation regulation or positive regulation
innate immune claim-negative to virus response response response regulation regula	process division generation segregation proliferation cell division
Innate response respo	positive regulation of regulation of glucose import regulation regulation of glucose import regulation regu
IIIIIIUILE positive regulation defense regulation defense regulation of overall positive regulation re	ecretion hormone regulation of strata cell cytokine cytokine cytokine cytokine cytokine conduction of neuron apoptotic cultive,
response in the state of the st	ion transport dendritic production production negative cess
negative response to response	ative regulation of regulation of regulation of regulation dendritic
regulation of to response to symbiont to virus proliferation of proliferat	Togalation of peptide production
inflammatory response bacterium bacterium response to startle detection of control response to startle detection of con	ion transport endocrine cell cytokine leak of leak ocyte
reconcined to endocome to endo	steroid hormone secretion of protein secretion secretion secretion
WOUTUINITY response to symbiotic symbiotic response to symbiotic symbiotic response to symbiotic response to symbiotic symbiotic response to symbiotic res	um no mentange de meditange de
response to lutigus wounding symbiont assembly assembly positive renal positive r	Secretion secretion exceptions exception exceptions appointed production production production reviews operative regulation
response response to response to response to response to regulation of the regulation of the regulation of regulation of the r	dation regulation of positive positive positive impatrial migration of positive fundamental migration of mission of m
protozoan to visus by heat origin response ischemia response ischemia checkboint motility membrane checkboint motility motility membrane checkboint motility membrane checkboint motility m	throw secretion to membrane secretion production produc
