Genes gained in PHEI1 MF TreeMap

phenylpyruvate tautomerase activity	glutathione transferase activity		cytokine activity		actin filament binding
intramolecular oxidoreductase ad	acid sphingomyelin phosphodiesterase activity	intramolecular oxidoreductase activity	unfolde chaperone binding	ed protein binding calcium–dependent protein binding	Hsp70 protein binding
intramolecular oxidoreductase activity, transposing C=C bonds	adenylyltransferase activity	glutathione peroxidase activity	unfolded protein binding	magnesium ion binding	actin monomer binding
